

## FLEXIBLE PIPING COMPONENTS FOR CORROSIVE SERVICE

Flexible connectors such as Expansion Joints and Hose are the most common ways to reduce stress due to tremor barriers, misalignment, compression, expansion as well as isolate vibration and shock in process piping, tanks and pumps. Expansion joints offer a low spring rate to protect stress sensitive Thermoplastics, FRP, glass or graphite equipment. Hose offers lateral and angular movement as well a greater variety of connections to choose. Hose is available in sizes thru 3/8" thru 10" and Expansion joints are available form 1/2" thru 42".

PTFE Lined Elexijoints

PTFE,PFA,PVDF lined Hose

Stainless Steel and Alloy Hose

**Flexible connectors insure the "Safe and Reliable transfer of fluids"**

**RARITAN**  
SINCE 1943 GROUP

## FLEXIBLE PIPING COMPONENTS FOR CORROSIVE SERVICE

Flexarmors

Chlorine Hose

Specialty hose

### Available from Raritan Group:

- Raritan can provide the design you need that is built to perform
- Raritan has the industries most versatile selection

### Types of Hoses:

- Smooth Bore
- Convolute
- Conductive
- Heated
- Food Grade
- Steam
- Pharmaceutical Grade
- Chlorine

### Performance features:

- Flexible
- Corrosive Resistant
- Chemical Resistant
- Hi-Purity
- Hi-Pressure
- Cleanable
- Durable
- FDA
- Over 75 different styles of end connections
- Reduces stress on piping and equipment
- Reduces vibration and sound
- Reduces failures

**Flexible connectors insure the "Safe and Reliable transfer of fluids"**
